

## Natural gas pressure into power

Discover AQYLON's **IST\*** concept for pressure reducing stations

\* Inducing Stator Turbine

### Benefits:

AQYLON's inducing stator turbine concept allows a robust energy recovery of natural gas pressure into power. Its architecture ensures:

- Can be installed on > 1 million pressure reducing stations
- Mean power production of 500 kW
- Low customization, simple replication and series production
- Target selling price is around 0.5 €/W installed
- Estimated payback time is < 1,5 years (with a power cost of 0.04 US\$/kWe)
